MITIGATION

- Setting up and maintaining nurseries for forestry Restoration and management of agroforestry areas by the community
- Support and implementation of community patrols and mixed patrols
- Implementation and operationalization of management transfer
- Reduce deforestation and greenhouse gas emissions (CO₂)
- 7.4 MtCO₂eq Emission reductions since the start of the project (in 2022 / NERF)
- 3,146 Ha Forest restoration on degraded lands within the CAZ and COFAV protected areas / Carbon project areas

ADAPTATION

- 23,800 HH have received sustainable agriculture production capacity building and food crops and some cash crops in kind grants
- 17,125 Hectares of critical habitats managed sustainably by the local communities within the agricultural landscapes
- 2,988 Hectares of critical habitats restored within the agricultural landscapes
- 118,309 of males and females benefiting from adoption of diversified, climate resilient livelihoods options
- 149,511 vulnerable farmers, businesses, and public sector services use improved tools, instruments, strategies, and activities for responding to climate variability and climate change

To improve the resilience of smallholder farmers vulnerable to climate change, reduce greenhouse gas emissions from deforestation, and promote investment in climate change mitigation

COMMUNICATION

- Implementation of 25 pilot schools on environmental education for children
- Production of 23 radio programs on the protection of biodiversity
- Demonstration of cultivation techniques adapted to climate change
- Distribution of community awareness tools
- 207,066 people were informed on the potential impacts of climate change and range of responses
